

Recorded Webinar • Speaker : Lisa Machuca

AB can assist in reducing your risk

Is data integrity and quality necessary for your organization

If data integrity and quality are necessary for your organization to comply with GLP, GMP, ISO, Clinical Diagnostic, and Human Identification regulations, Applied Biosystems can help.

Applied Biosystems Compliance services can assist with:

- Demonstrating that your laboratory system meets the intended purpose as your organization has defined and documented it would.
- Documenting that your system operates to specification from installation and periodically throughout your future years.
- Verifying proper security controls and change control procedures to ensure data is not altered and that proper system records are documented and retained.

Service Development

About the Speaker

Lisa has 15 years experience combined in the medical device and life science industries acting as a Strategic Product Marketing and Sales Professional.

Lisa has been with AB since 2006 where she is responsible for managing product development and marketing activities for Mass Spectrometry and Microbiology instrument and software qualification services.

Prior to AB, Ms. Machuca worked at Covidien (formerly Tyco Healthcare) as a Senior Product Marketing Manager; MDS Sciex as a Director of Product Marketing; and at Agilent Technologies as a Senior Strategic Product Marketing Manager for Life Science Services.

Lisa has an MBA from St. Mary's School of Business and a BA in Chemistry from the University of Minnesota. She is based in San Francisco.
